

# I-Warehouse

# I-WAREHOUSE

## Overview

PharmaVigilant's I-Warehouse provides sponsors with unlimited access to all data that has been generated throughout the clinical development program. All data from trials run with InSpire are exported nightly into this central data repository for access the next morning.

## Data on Demand

The Data On Demand button in the I-Warehouse allows users with the proper permissions to download updated SAS or SDTM datasets with the push of a button.

### *Unparalleled access to clinical trial data*

- Data exports in Excel, SAS, or CDISC ODM/SDTM formats
- Custom exports upon request
- Unlimited Downloads 24x7
- 21 CFR Part 11 compliant system

## Unlimited Access to the InSpire Reporting Tool (IRT)

The I-Warehouse includes access to the InSpire Reporting Tool (IRT), the only commercially available cross-study reporting tool. The IRT provides users with the ability to run ad-hoc reports on any metadata fields captured in the InSpire EDC system.

### Optimize your clinical trial data

The IRT allows users to dynamically query their study data and generate unlimited customized reports. Users can specify selection criteria and output fields, optimizing and filtering their search results and refining the desired data.

- Sort data by subject or across subjects
- Save reports and search criteria
- Regenerate saved reports
- Export reports in Excel or date/time stamped PDF documents
- Generate product analysis valuation for potential partners/acquisitions

This invaluable system for regulatory reporting, ongoing safety assessment and submission requires no Regulatory, Safety or Clinical programming experience.
