**PHARMAVIGILANT EXPANDS INSPIRE EDC SYSTEM TO SUPPORT MULTIPLE LANGUAGES**

*InSpire EDC Now Translates to More Than a Dozen World Languages*

**WESTBOROUGH, Mass., October 26, 2010** – PharmaVigilant, a clinical trial technology provider, has enhanced its InSpire Electronic Data Capture (EDC) system to support multiple languages for the management of even more complex, large-scale global clinical trials. InSpire now supports Italian, Spanish, Portuguese, French, German, Dutch, English, Danish, Swedish, Norwegian, and Icelandic as well as Malay and Swahili languages, with additional languages to be added in a multi-phased approach. These updates allow sponsors to easily build multilingual studies, and support data entry and reporting in any of these languages for easier and more compliant data capture.

PharmaVigilant's InSpire EDC system addresses the evolving complexities of clinical development by bringing together best-in-class technologies that support the needs of both the industry and end-users throughout the entire clinical development process. With PharmaVigilant's integrated approach, InSpire eliminates the need for separate systems and ensures fast study start up and data lock by providing unique, role-specific work flow tools empowering sites to enter and review data with minimal training. Now available in multiple languages, the system features customized study tabs with real-time information on enrollment, data entry, data monitoring, sign off and data lock.

According to James DeSanti, founder and chief executive officer, PharmaVigilant, "The adoption of remote monitoring was a key driver for the expansion of our system to multiple languages, as sponsors look to ensure that essential documents maintain regulatory compliance. With clinical trials continuing to expand globally and into new and emerging regions, this enhancement offers users the ability to access our technology at anytime, from anywhere in the world, and now in multiple languages. Having this enhanced language capability is a huge step forward for our global pharmaceutical partners."

PharmaVigilant offers a full suite of clinical trial technology offerings including InSpire EDC, I-Warehouse, I-Builder, I-Vault electronic Trial Master File (eTMF), I-Vault remote Source Document Verification (rSDV), study administration and PaySite - an automated site payment system. PharmaVigilant focuses on Phase

I-IV clinical trials, registries and other post-marketing studies. The technology has supported more than 200,000 patients in 14 countries across North America, South America, Europe, Asia and Australia and continues to expand rapidly.

**About PharmaVigilant:**

Based in Westborough, Mass., PharmaVigilant is a SaaS company founded in 2005 to provide broader technologies to streamline the clinical trial process for biopharmaceutical companies. Its full suite of patient-based technology automates the collection, management and analysis of clinical trial data and most importantly puts that data in the sponsors' hands when and how they want it. Sponsors rely on PharmaVigilant to ease the regulatory and FDA submission and approval process and ultimately go-to-market more quickly with top quality drugs.
