

PaySite

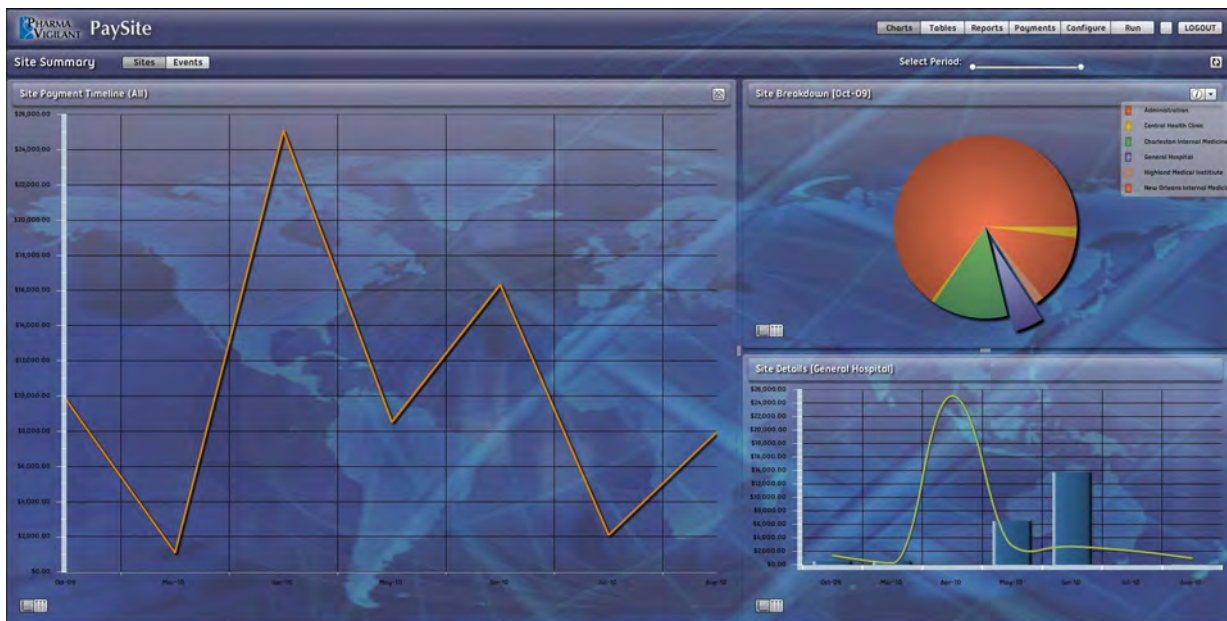

Overview

PaySite is PharmaVigilant's site payment module. Integrated with the InSpire EDC system, PaySite delivers fast site payment, based upon EDC data entry performance and individual site contracts. Combined, this functionality streamlines the site payment process, improving the relationship between the sponsor and the site.

Streamlined, On-Demand Reporting and Payments

With PaySite, sponsors can view payments made throughout the course of the study, both graphically and within defined reports. Sponsors receive a monthly report of the amount each site has earned, the breakdown for the site payments, and a cumulative amount for each site. This unique system also allows for the modification of current unpaid eligible events and the creation of manual overrides when required.

With the new site payment system, you can:

- View interactive graphs and defined reports
- Generate site letters defining payouts and criteria associated with the payment
- Define and implement complex compensation programs in any currency
- Export information directly into your accounting system
- Create payment reports on demand
- Enhance site/sponsor relationships

When sites see a fast turnaround between data entry and payment, they are much more motivated to work on your study.
