PHARMAVIGILANT SETS THE STANDARD FOR TRAINING IN THE CLINICAL TRIAL INDUSTRY

PharmaVigilant University is the Industry's First Educational Program to Gain IACET Accreditation

ORLANDO, Fla., April 12, 2010 – With the launch of PharmaVigilant University, [PharmaVigilant](#), a clinical trial technology provider, became the first company in its market to have an International Association for Continuing Education and Training (IACET) accredited training program. By launching this program for clinical research professionals, PharmaVigilant is setting the bar for training in the clinical trial industry. As a testament to the need for industry training, Monitorforhire.com will be collaborating with PharmaVigilant to train 100 of its registered clinical research monitors.

PharmaVigilant University is a unique, accredited training program with a curriculum that not only covers PharmaVigilant's products, but also educates CRCs, CRAs, CPIs and CTIs on good clinical research practices, skills for navigating the changing political, regulatory and financial landscapes and business principles that apply to clinical research. The courses are designed to help both trial sponsors and end-users stay current on the latest processes in clinical trial data management.

“As the industry evolves, so do the products and services designed by technology providers to meet the increasingly sophisticated data management needs of trial sponsors. Until now, there has been a void in training and continuing education programs focused on giving monitors the training necessary to use technology products to their greatest potential as individual tools or as a powerfully integrated toolset,” said James DeSanti, the Company's CEO and Founder. “A new generation of technology products gives way to this new level of sophisticated training so that in the end, monitors industry-wide will have quicker ramp up time and a smoother and more efficient clinical trial data collection process.”

According to Scott Freedman, President of Monitorforhire.com, “This collaboration with PharmaVigilant University will enhance the valuable tools offered to independent trial monitors. We want monitors to be prepared as they work with different sponsors. Thanks to PharmaVigilant University, I am pleased that there is now a program available that trains monitors on data management. Clearly, remote monitoring is

gaining industry-wide adoption, and through this program more monitors will now have the training necessary to meet these changing needs.”

PharmaVigilant offers a full suite of clinical trial technology offerings including Electronic Data Capture (EDC), data warehousing, study building (I-Builder), Electronic Trial Master File system (eTMF), Remote Source Document Verification (rSDV), study administration and an automated site payment system. PharmaVigilant focuses on Phase I-IV clinical trials, registries and other post-marketing studies. The technology has supported more than 200,000 patients in 14 countries across North America, Europe, Asia and Australia and continues to expand rapidly.

For more information about PharmaVigilant or PharmaVigilant University, please visit the PharmaVigilant booth #430/432 at the 19th Annual Partnerships in Clinical Trials Conference April 12-14, 2010 in Orlando, FL.

About PharmaVigilant:

Based in Westborough, Mass., PharmaVigilant is a technology company founded in 2005 to streamline the clinical trial process for biopharmaceutical companies. Its fully integrated suite of patient-based technology automates the collection and management of clinical trial data and most importantly puts that data in the sponsors’ hands when and how they want it. Sponsors rely on PharmaVigilant to ease the regulatory and FDA submission and approval process and ultimately go to market more quickly with top quality drugs. For more information, visit www.pharmavigilant.com.

About Monitorforhire.com:

Monitorforhire.com is the only Web-based service for clinical trial sponsors in biotechnology, pharmaceutical, medical device and contract research organizations to instantly connect with thousands of qualified, independent clinical monitors in a variety of therapeutic areas. Today, the company has a network of more than 3,600 registered monitors in 42 countries, and nearly 800 clinical trial sponsors. For more information, please visit www.monitorforhire.com or call +1610-862-0909.
